INTRODUCTION

What is Solvent Cement?

PVC solvent cement, sometimes referred to as PVC cement, PVC Glue or PVC Solution is an adhesive-like substance used to join (glue) two pieces of PVC together. It is used to join fittings to PVC pipe or/and individual pieces of PVC pipe to each other.

The most common plastic pipe and fitting that can be solvent welded are:

PVC (Polyvinyl Chloride, vinyl, uPVC)
CPVC (Chlorinated Polyvinyl Chloride)

What is Pipe Cleaner?

Pipe Cleaner is a mixture of solvents used to clean dirt, grease, and foreign material on the surface of the pipe and fitting. It is very important that the surface of the pipe and the inside of the fitting is very clean and free of all foreign material to make a leak proof joint.

CEMENT TYPES AND BODIES (GRADE)

There are three basic types of Solvent Cements:

PVC used on PVC pipe & fitting (Usually cold-water systems)
CPVC used on CPVC pipe & fitting (Usually hot-water Systems)

Above cements can be divided into three categories or grades:

Regular Body thickness of cooking oil
Medium Body thickness of heavy duty engine oil
Heavy Body thickness of syrup or honey
